

TESEO

We have managed to surpass the soft sitting of all models with the feeling of sitting on a cloud.

Teseo is a new modular program that offers a large number of very interesting advantages that we are sure will make it a new bestseller in our catalogue.

ollowing the launch of model Klee, we found the need to create another modular program that could offer a simple and modern design similar to Klee, but with a much higher comfort.

The goal was to surpass the smooth sitting of the Tempo and Korinto models and try to achieve the feeling of sitting on a cloud. It all started with an innovation project almost 2 years ago, and today we can present this new proposal that we are confident will delight all our customers.

SIT ON CLOUDS: Patented System

This new seating system is a worldwide innovation and has been patented by Fama Sofas.

This new type of seating is part of an R&D project that we have been working on for several years. The result is a new seating system that works differently from the usual methods, providing a higher comfort than any other products in the market. Furthermore, it allows for the lifespan of the seat to be multiplied in perfect usage conditions, enabling the easy and straightforward replacement of all the constructive elements that may age over time.

CIRCULAR DESIGN: a sofa for life

Like most of our recent projects, sustainability is also a fundamental aspect of this new design. Both the seat core and the top quilt that provides that special touch can be exchanged and replaced. Additionally, we can also replace the 'secret suspension system'. Moreover, all the covers of this model are removable, so we have a new model that can extend its average lifespan almost infinitely

PREMIUM VERSION AND BASIC VERSION

Aware that this new 'Cloud Seating' system may be out of reach for some customers, we also offer Teseo in a Basic version with NEA suspension + 35kg foam and fibre.

TESEO

MODULES

Teseo offers various options for chaise, corner pieces, upholstered arms, and adjustable tables. A world of elements is available to create anything from the smallest to the most spectacular composition, achieving a simple and contemporary design while providing an unprecedented level of comfort.

TWO DEPTHS SYSTEM: Teseo Move (Patented seal)

Finally, Teseo features a new backrest moving system that modifies the seat depth, offering two types of seating in the same module: regular or Chaise. The mechanism used was created by the Fama R&D department and presents a significant innovation compared to other systems on the market: it does not require a visible cut in the fabric to advance forward.

TESEO YOU&ME "O"

Another peculiarity of the Teseo program are its You&Me elements.

"O" is a new You&Me armchair from the Teseo family. After achieving that special seating experience in the Teseo model, where you seem to float among the clouds, we could not resist creating an armchair with a special touch that could have a life of its own.

Thus was born "O," an octagonal armchair equipped with the new mechanism designed by our team to move the backrest forward, and with two asymmetrical arms, one upholstered and the other with a board that can function as an armrest, backrest, or simply as a table.

Creating this space that is so different and special already captivated us. The feeling of letting yourself fall into Teseo "O" is the closest thing to disappearing from the world for a good while. A new, almost magical space.

"Sit on clouds" system

The feeling of sitting on clouds...

The "Sit on clouds" system is an innovation devised by Fama Sofas' R&D team that provides an absorbent and super soft seating experience, resembling sitting on clouds. It also guarantees non-deformability for a minimum of 10 years, with the added option of system replacement at a very affordable cost after this period.

Relax mechanisms access system

System designed to access all electronic components.

Another interesting innovation is the system designed to easily access all electronic and mechanical components of the recliner armchairs.

We hope that this advancement in our Collection will soon become a best-seller, helping us continue to bring happiness to our end customers.

"Back-to-front" backrest hinge

"TESEO MOVE"

We are introducing a significant innovation in the world of upholstered furniture.

The existing hinge systems in the market for moving the backrest forward and backward have a major drawback, which is the need to make a cut in the seat cushion to allow for the mechanism to move, resulting in an unaesthetic construction in these types of sofas.

In the Fama R&D department, we have developed a new hinge that offers the same functionality but does not require a visible cut in the seat cushion. It requires a shorter cut that is not visible when the backrest is in the forward position.

The hinge has been introduced only in the Teseo model. In the Arianne model we are using the conventional hinge available in the market.
