

ATLANTA&BALTIA

Our new modular recliner sofas

*"It does not look like
a recliner sofa."*

After the great success of Avalon "the most comfortable sofa in the world", we aimed to create a new recliner sofa that could offer the same comfort but with a more modern design, avoiding the high backs which seem to be more difficult to fit in modern living rooms.

The new models Atlanta and Baltia share with Avalon the seat system, capable of offering a length and comfort hard to beat. This seat cushion keeps the advantage of having removable covers which you can easily wash.

Another important point is that the touch buttons are hidden to avoid domestic incidents and to guarantee children's safety.

Atlanta is the result of a research and design project which lasted longer than a year. The aim was to create a low backrest that could turn into a high one in a quick way, but not letting anyone imagine that this was possible. We have designed a very clever mechanism that allows us to hide a headrest in a conventional backrest. In the blink of an eye, we can take the headrest and place it on the top of the backrest.

Many people would love to enjoy the comfort that these reclining mechanisms offer. However, they are reluctant to use these types of designs due to the aesthetic.

With Atlanta, we have accomplished a very modern, contemporary design, which cannot be identified as a recliner sofa at first sight.

4 arm options

In addition, we have designed four different arms that can be used both with Atlanta and Baltia.

This offers a wide range of possible combinations in order to please our customers, and suit their needs.

SUNSET, JAZZ, WAVE and DUNE (S, J, W, D) are the choice of arms that we are presenting. The special feature is that they can be assembled with a simple mechanism that does not require the use of any tools. The different options can be seen in the following images.

Baltia has a conventional one-piece backrest which can be lifted and folded by a smart multipositional mechanism that we have especially created for this design.

Our machinery offers a variety of technological possibilities which have allowed us to add several innovations that have given high comfort to the backrest. They are small details that cannot be seen, although they can be appreciated when you sit in.

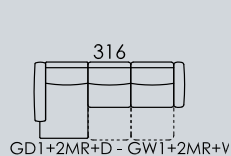

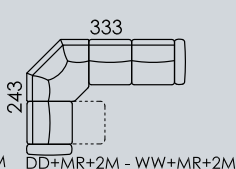

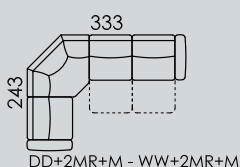

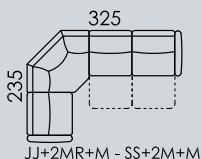

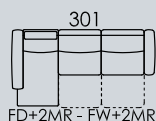

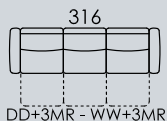

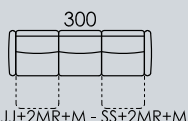

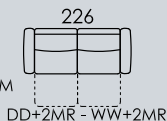

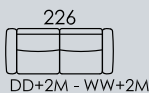

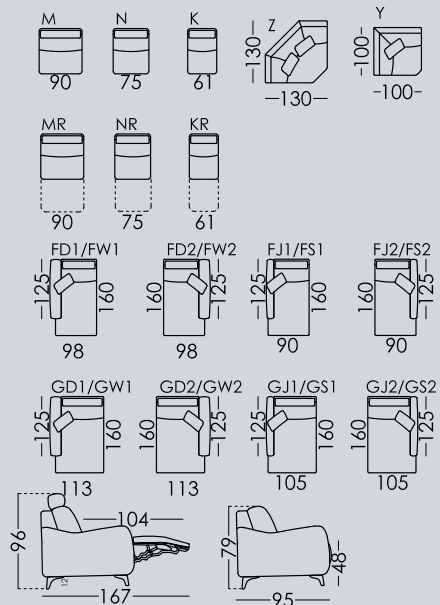

Most of this type of backrests that can be found in the market have been designed with a horizontal stitching that is placed between the backrest and the lumbar support, so that fabrics do not crease. We managed to avoid this stitching and the backrest is smooth in both positions, generating only slight wrinkles when it is raised to the maximum.
